GENERAL PRODUCT INFORMATION

Product name: Two-way solenoid valve ELEPHANT-DW31 DN10-DN25 (3/8" - 1") of direct action normally closed type, with coil 220V/24V.

Purpose: Solenoid valve is a special device designed for convenient control of the working medium. This process is carried out in a pressurized pipeline.

In a normally closed solenoid valve, the closed position is maintained if no control voltage is applied to its induction coil. When voltage is applied to the coil, the normally closed valve opens and allows the process medium to flow through. When the control voltage is switched off, the valve closes automatically and blocks the medium flow in the pipeline.
